***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-19, drawn to an uninterruptible power supply, classified in class 174, subclass 50.
  - II. Claims 20-23, drawn to a method of installing an uninterruptible power supply, classified in class 029, subclass 592.1.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the first invention is an uninterruptible power supply comprising an equipment rack, an input, a DC power source and a power distribution circuitry; and the second invention is a method of installing an uninterruptible power comprising the steps of providing an uninterruptible power supply, determining a location for the uninterruptible power supply, determining a necessary length of each of the power cable and packaging the plurality of power cables and the uninterruptible power supply for shipment to the facility.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
